

COVER LETTER

I identify a problem, I solve it, not just tech ones.

That's how I built a successful career on my previous area, like I'm doing so on tech.

Want to check it out?? Just google: Leandro Parisi PianoBike

I am a fast learner and like to understand the bussiness problems and product aspect of what I am building.

On my previous Job (XP Investimentos) many of my coworkers considered me someone whopreformed more than was expected from my position. I was part of a team which has built a Crypto exchange from scratch helping with architectural decisions and onboarding processes of new members on the team (even those who were more senior than me).

I also identified an opportunity to create a system which solved a problem related to micro services architecture, this solution basically did what Kafka Schema registry is supposed to do, but with low to no cost.

I am eager to learn, teach and be part of something that I really believe in.

Yours sincerely,

Leandro Parisi
